Web Application Developer

I'm a web app developer who is at home anywhere in a project from the API to the UX. I enjoy diving deep into problems as part of a team and coming up with solutions that weigh the tradeoffs and commit to the best path forward.

My goal is to find a position that allows me to creatively solve problems and share my experience while continuing to learn and grow as a developer and person.

I'm happy with React and Node for building great web apps, but I'm open to any technology that allows me to create exceptional user experiences. I believe no detail is too small to try and get right. I've worked as a member of a distributed team for over 8 years and pride myself on my teamwork and diligent written and verbal communication.

Above all, I believe that software is about people.

Work Experience

Senior Software Engineer - [GitHub](#) – June 2021-Present

- npm

Worked on the npm cli

- Bugs, features, planning, pull requests and released

JavaScript Developer – [&yet](#) – Jan 2013-April 2021

JavaScript/TypeScript

ES6+

LESS/SASS/PostCSS

Tailwind CSS

React/Redux

Node

Hapi/Express

Postgres

React Native

Firebase

Webpack/Parcel

XState

Developed web applications for clients and internally using Node.js and a variety of frontend technologies

- Architected and developed migration of Heroku's pricing application from jQuery to React and Redux
- Led React Native and Redux/Firebase development and deployment of a realtime video and chat app for prototype social network

- Led frontend development of multi-platform web app for CAA's music clients to route worldwide tours
- Developed the frontend and parts of the API for the Node Security Platform's public and admin interfaces

Frontend Developer – meltmedia – Feb 2011-Jan 2013

jQuery JavaScript/ES5 Node require.js

Developed frontend solutions for multiple teams creating marketing sites for Genentech and other clients

- Architected custom framework and plugins for shared use across all marketing sites with require.js
- Developed general use plugins for multi-platform analytics, DOM text highlighting, and push state navigation
- Researched and prototyped a multi-choice quiz application using JavaScript to replace a legacy Flash solution

Web/Game Developer – Jawa – Feb 2010-Feb 2011

PHP Flash AS3 CSS MySQL

Managed frontend development emphasizing code reuse and repeatable development and deployment patterns for 100+ marketing sites

- Managed a team creating frontend templates for a large stable of MVC data driven sites
- Worked as a team member writing full stack code (PHP, HTML, CSS, JS) for MVC websites
- Wrote custom tooling to ease developer experience in writing, managing, and deploying projects
- Developed game logic using AS3, PHP and JS to create isometric Flash games for deployment to Facebook

Web Developer – Mosaic Team – Feb 2008-Feb 2010

JavaScript jQuery CSS WordPress

Developed frontend and backend solutions for small business clients using PHP and JavaScript

- Created custom season ticketing web application for local theaters
- Developed template editor for clients to customize off-the-shelf small business sites

Education

University of Advancing Technology – Sep 2005-Dec 2008

Bachelor of Science (Cum Laude) in Software Engineering with an emphasis in Web Programming
